

# Fall Protection

Prevent falls on the job with simple pre-task checks and the right protection.

## 5-minute toolbox talk

Use this sheet alongside the video preview to lead a quick field discussion before work begins.

<ul style="list-style-type: none"><li>• Unsecured ladders or damaged ladder feet</li><li>• Unprotected roof edges and floor openings</li><li>• Improper scaffold setup or missing guardrails</li><li>• Slippery, cluttered, or uneven walking surfaces</li></ul>	<ul style="list-style-type: none"><li>• Use guardrails, safety nets, or a personal fall arrest system as required</li><li>• Inspect harnesses, lanyards, anchors, and connectors before use</li><li>• Secure ladders on stable ground and maintain 3-point contact</li><li>• Do not remove guardrails or covers without authorization and replacement controls</li></ul>

## Supervisor checklist

<input type="checkbox"/> Review work areas above 6 feet before the shift starts
<input type="checkbox"/> Confirm proper anchors and tie-off points are available
<input type="checkbox"/> Remove debris and trip hazards from access paths
<input type="checkbox"/> Stop work if fall protection equipment is missing or damaged

**Safety reminder:** A 2-minute equipment check can prevent a life-changing fall.
